Authorization Layer and Authorization Policies

Extending Authorization Policies with Requirements and Handlers

Authorization Policies

Policy-based authorization offers increased flexibility

It decouples authorization and application logic, which enables a reusable and testable authorization structure

Demo

Creating A Simple Authorization Policy

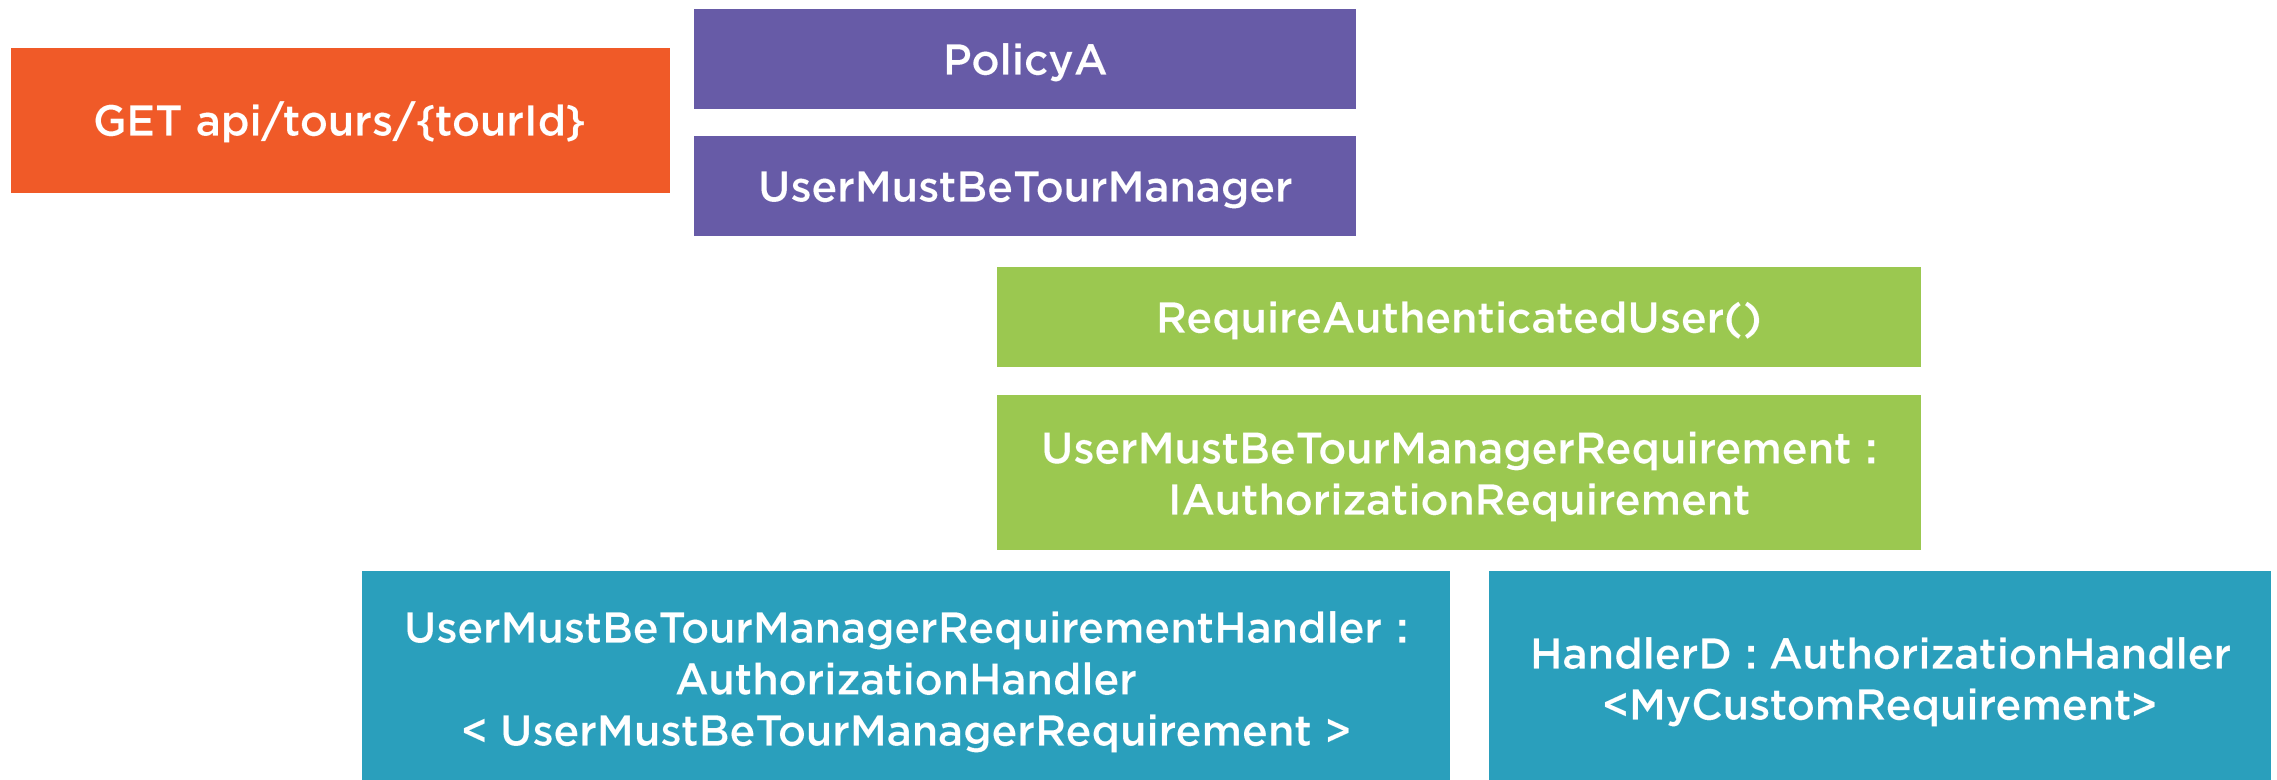

Extending Authorization Policies with Requirements and Handlers

Built-in policy options are great for simple cases

More complex rules requires extending the policy

Extending Authorization Policies with Requirements and Handlers

Demo

Creating a Custom Authorization Policy

Summary

An authorization policy is a collection of conditions a user must meet

It offers flexibility and decouples authorization and application logic

- Reusable and testable authorization structure

You're ready to be AWESOME
